Proposed Change:	Have the option to add a document to several properties/assets at one time. Allow the field to select more than one property/asset in the dropdown list of properties when attaching a document that supports more than one property asset.				
Justification:	Currently, if there is supporting documentation that supports more than one property, it has to individually be attach separately to each property by adding to each one separately. Having the ability to attach all properties that the document support at one time would be more efficient and save time.

FAC Remarks:	<b>FAC Not Recommended.</b> Documents that are related to several assets can currently be uploaded as site level documents.
